📖 dietisdie.tistory.com

Frontend developer running My Feed, a feed-management web service used on farms. I shipped a front-end permission layer and leaner notification requests to production, fixed mobile overflow, and rebuilt the company homepage in Next.js and TypeScript.

EXPERIENCE

AimBe Lab

2025.07 — Present

Engineer, full-time · web development and operation

- **My Feed** — monitoring, admin and notifications; each poll cut from six requests to one (production), monitoring requests 98 → 50 (staging).
- **Homepage rebuild** — rebuilt around the service, with enquiries validated on the server and filed as Flow tasks for the sales team; contributed to a deal with a feed company.
- Proposed human labelling of images the model failed to segment for retraining, and built the labelling screen.

The Innovators

2025.03 — 2025.06

Intern · Frontend · Deployment automation

- **StartupQT** — frontend for a quiz authoring and review web service.
- Deploys on GitHub Actions with a self-hosted EC2 runner; moved to PM2 when the Docker build ran out of disk.
