📅 dietisdie.tistory.com

Frontend developer running My Feed, a feed-management web service used on farms. I ship fixes to permissions, notification requests, mobile screens and AI result screens, and rebuilt the company homepage in Next.js and TypeScript.

EXPERIENCE

AimBe Lab

2025.07 — Present

Engineer, full-time · web development and operation

- **Permissions** — a front-end layer (permissions.js) that shows menus by permission; closed a gap where changing the farm ID in the URL opened another farm's page (production).
- **Homepage rebuild** (Next.js · TypeScript) — planned, designed and built it to lead customers to enquiries (server-validated, filed as Flow tasks); contributed to a deal with a feed company.
- **Fewer requests** — notification-status requests cut from six to one per poll (production), monitoring-screen requests 98 → 50 (staging); a polling fallback where Edge 151 dropped pushes.
- **Screens** — no sideways scrolling on mobile (163px at 375px); per-permission table columns; list-to-detail order.
- **AI result screens** — piloted a 2D feed-level view (S-Ray) on web and app for two farms; built a Canvas editor to re-label failed segmentations for retraining.

The Innovators

2025.03 — 2025.06

Intern · Frontend · Deployment automation

- **StartupQT** — frontend and deploy automation (GitHub Actions, EC2 runner) for a quiz web service; moved to PM2 when Docker builds ran out of disk.
