Frontend developer running web development and operation for My Feed, a feed-management service used on farms. I turn customer enquiries into screen fixes, and cut the monitoring screen from 98 requests to 50 after finding the bottleneck with timing logs.

EXPERIENCE

AimBe Lab

2025.07 — Present

Engineer, full-time · web development and operation

- My Feed** — monitoring screens, admin and web notifications; requests cut from 98 to 50 (staging), and each notification poll from six requests to one.
- Homepage rebuild** — rebuilt for customers, with online enquiries routed to the sales team; contributed to a deal with a feed company.
- Built a mask-labelling tool for failed segmentations; proposed SAM2, which the AI engineer applied.

The Innovators

2025.03 — 2025.06

Intern · Frontend · Deployment automation

- StartupQT** — frontend for a quiz authoring and review SaaS.
- Deploys on GitHub Actions with a self-hosted EC2 runner; moved to PM2 when the Docker build ran out of disk.
